Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1. Statement			
Novelty (N)	Claims	<u>1-5</u>	YES
	Claims	<u></u>	NO
Inventive step (IS)	Claims	<u>2-4</u>	YES
	Claims	<u>1, 5</u>	NO
Industrial applicability (IA)	Claims	<u>1-5</u>	YES
	Claims	<u></u>	NO
2. Citations and explanations (Rule 70.7)			
Claims 1 and 5			
<p>Document 1 (JP 2001-276484 A (Toto Ltd.), 09 October 2001, entire text and fig. 1 to 5) discloses a washing machine that comprises an ion elution means whereby metal ions are eluted and then added to water, wherein the water with metal ions added thereto is supplied as a processing agent.</p>			
<p>Document 2 (Microfilm of the specification and drawings annexed to the request of Japanese Utility-Model Application No. 151219/1979 (Laid-open No. 69372/1981) (Tokyo Shibaura Electric Co., Ltd.), 09 June 1981, entire text and fig. 1) discloses a washing machine with a configuration such that in cases when an unbalance is detected during the spin cycle for extracting water, which is carried out subsequent to supplying the processing agent, said unbalance is corrected manually without supplying water thereto, unlike in cases when an unbalance is detected prior to supplying the processing agent.</p>			
<p>Document 3 (JP 2001-9188 A (Sharp Corp.), 16 January 2001, paragraph [0036] and fig. 2) discloses a washing machine that comprises a drum, which is positioned so that the rotational axis of the drum</p>

intersects with the vertical direction of the washing machine.

It is common practice to configure so that operations that would otherwise have been carried out manually by a human are instead carried out automatically in a machine; therefore, it would be obvious to a person skilled in the art of the technical field in question to employ the invention that is disclosed in document 2 in the invention that is disclosed in document 1 and further configure so that in cases when an unbalance is detected during the spin cycle for extracting water, which is carried out subsequent to supplying the processing agent, the operation for correcting unbalances without supplying water thereto, which is different from the operation that is carried out in the cases when an unbalance is detected prior to supplying the processing agent, is carried out automatically by the washing machine.

Likewise, it would also be obvious to a person skilled in the art of the technical field in question to employ the form of the drum that is disclosed in document 3 in the invention that is disclosed in document 1.

#### Claims 2 to 4

Document 2 (Microfilm of the specification and drawings annexed to the request of Japanese Utility-Model Application No. 151219/1979 (Laid-open No. 69372/1981) (Tokyo Shibaura Electric Co., Ltd.), 09 June 1981, entire text and fig. 1) defines the general state of the art in the technical field in question, and discloses a washing machine with a configuration such that in cases when an unbalance is detected during the spin cycle for extracting water, which is carried out

subsequent to supplying the processing agent, said unbalance is corrected manually without supplying water thereto, unlike in cases when an unbalance is detected prior to supplying the processing agent, in order to prevent the loss of the processing effect that was imparted by the processing agent. However, the technical feature of supplying water with metal ions added thereto to the receiving tank and then carrying out a rinse cycle for correcting the balance by stirring the contents of the receiving tank is not disclosed or suggested in any of the documents that are cited in the international search report.
